Subject: Atlantic Relocation Systems - Historical Aerial Photos

Attachment: Atlantic Relocation Systems AST Historical Timeline.pptx [3977 KB]

Ellen,

Per our call, see the attached file of historical aerals. I put them in a powerpoint so I could point out where the tank is currently located, and where the structure appears to be consistent going back to at least 2001. I think they had a tank going back to 1998, but the shape of the tank appears slightly different in the 1998/2001 pics. – The tank as it exists today has a metal roof overhead (to shed storm water/avoid accumulating storm water). Just guessing here, maybe they changed tanks in order to add secondary containment and/or the storm roof?

If you need them, I can send over the actual aerial files.
